Summary

JavaScript and database developer with an enthusiasm for backend- and database-oriented work, familiar with MySQL, MongoDB, GraphQL, and upwards of a dozen JavaScript libraries. Successfully graduated and received a certificate from a highly-accelerated remote full-stack development course hosted by Washington University. Natural leader and known for giving assistance and guidance to peers and reaching out for more information. Capable of working on complex, large-scale projects individually or with others.

Areas of Experience

Node.js, Express.js, MySQL and Sequelize, MongoDB and Mongoose, Handlebars, HTML, CSS, jQuery.

Skills

Cooperation

- Participated in three group projects during bootcamp course, which all scored upwards of 95 points.
- Maintained continual communication with team members and encouraged regular check-ins and progress reports.
- Supervised a team by delegating tasks, encouraging progress, and coaching team members when necessary.
- Sought advice from classmates when needed.

Problem-Solving

- Skilled bug-fixer due to ability to locate and check all possible points of failure.
- Can swiftly adapt to sudden changes to a plan or new requirements.
- Diagnosed and resolved multiple major bugs in multiple applications.

Database Management

- Familiarized self with MySQL and MongoDB within a week apiece.
- Implemented schemas, models, queries, and database connections for numerous applications.
- Analyzed data needs for an application and drafted a plan for the schema of the database within a day.

Back-end Programming

- Connected back- and front-ends quickly and easily through use of RESTful naming practices.

- Built and kept track of sets of queries, mutations, type definitions, and resolvers for GraphQL-based applications.
- Independently constructed API and queries for an application with a large and complex database.
- Designed user authentication using session tokens and JSON web tokens.

Experience

Selected Projects

Lightbox

- Express, Express Session, MySQL, Sequelize, Bcrypt, Handlebars, EC2
- Lightbox is a blogging website with a minimalist UI and aesthetic, so you can focus on what's important.
- <http://ec2-13-52-212-160.us-west-1.compute.amazonaws.com> || <https://github.com/FinnStitcher/lightbox>

Wildfound

- Express, MySQL, Sequelize, Handlebars, Tailwind, Amazon RDS
- Wildfound is a web app created to browse a database of species and ecoregions around the world.
- <https://wildfound-production.up.railway.app> || <https://github.com/FinnStitcher/wildfound>

Deep Thoughts

- React, React Router, MongoDB, Mongoose, JWT
- Deep Thoughts is a social media app where users can share and react to "thoughts" and make friends.
- <https://deep-thoughts-two-production.up.railway.app> || <https://github.com/FinnStitcher/deep-thoughts-two>

APPLY

- React, React Router, MongoDB, Mongoose, JWT, GraphQL, Apollo
- APPLY was built for recent graduates to keep track of positions they've applied to, and positions they're interested in.
- <https://github.com/sarameadows/APPLY>
